HOW TO PLAY:

- 1) Write the NFC team name in the blue half of the upper-left square, or above the grid.
- 2) Write the AFC team name in the red half of the upper-left square, or to the left of the grid.
- 3) Have participants select blank squares from the grid by writing their name or initials in each square.
- 4) Once all squares have been selected, randomly assign four sets of numbers 0-9 to both the NFC and AFC colored boxes.
- 5) The first set of numbers will be used to determine first quarter winners, the second to determine second quarter winners, and so on.
- 6) If you do not get enough players to fill out all 25 squares, you can simply grey out the remaining empty squares.
- 7) At this point your grid is all set up. Wait for the Super Bowl to begin in order to follow along and see who wins.
- 8) Winners are determined at the end of the first quarter, second quarter, third quarter, and final score of the game.
- 9) To win, your square must lie at the intersection of the NFC/AFC numbers that correspond to the last digit of each team's score.
- 10) In the 25 square variation, all squares are assigned two NFC/AFC numbers so you have a greater chance of winning!

Example: The score at the end of the first quarter is NFC: 14 / AFC: 7. The first quarter winner would be the square that lies at the intersection of NFC: 4 / AFC: 7 (using the first set of numbers)

Example: The final score at the end of the game is NFC: 35 / AFC: 28. The final winner would be the square that lies at the intersection of NFC: 5 / AFC: 8 (using the fourth set of numbers)
